

# PRESSBOX

## PRESSURISATION UNIT

The Trebles PRESSBOX pressurisation unit provides automatic maintenance of optimal system pressure within a sealed system.

Availability in either a single or twin pump configuration complete with an 18L Cat5 AB Air Gap tank to satisfy back flow prevention requirements. A higher pressure pump can also be specified in both single and twin configurations.

The lightweight Aluminium enclosure combined with the included 'EasyMount' wall bracket aids installation. The PRESSBOX is in fact lighter than most other floor mounted units whilst boasting a higher tank capacity than the equivalent wall mounted only units.

The digital controller provides BMS connectivity with 2 contacts as standard including a common alarm along with a programmable alarm that can be customised with various parameters. As an option this can be expanded with an additional 3 contacts.
