Performance Puddle Buddy

The Puddle Buddy is a new generation residue pump, able to drain down to 1 mm. Designed to start pumping at a very low water level.

The anti-airlock prevents the Puddle Buddy from airlocking.

The oil filled motor, provides perfect cooling which enables the pump to run dry for prolonged periods.

The use of strong and flexible elastomers makes the pump very light weight while providing a strong and rugged pump suitable for semi-professional use.

The Puddle Buddy's high delivery volume (120 l/min) coupled to a high delivery head (7m), makes the unit suitable for a variety of different applications.

The professional design allows for easy maintenance.

The small footprint of the Puddle Buddy allows for easy installation in small and narrow spaces.
