Pipework connection is via PN 6/10 DIN flanges (EN 1092-2 and ISO 7005-2).</p> <p data-bbox="199 916 1450 967">The pump is fitted with a fan-cooled, permanent-magnet synchronous motor. The motor efficiency is classified as IE5 in accordance with IEC 60034-30-2.</p> <p data-bbox="199 974 1394 1025">The motor includes a frequency converter and PI controller in the motor terminal box. This enables continuously variable control of the motor speed, which again enables adaptation of the performance to a given requirement.</p> <p data-bbox="199 1032 1070 1059">The pump is fitted with a combined temperature- and differential pressure sensor.</p> <p data-bbox="199 1066 1126 1093">The stainless-steel pump housing makes the pump suitable for circulation of hot water.</p> <p data-bbox="199 1099 1420 1126">The pump is suitable for applications requiring pressure or temperature control and offers following control modes:</p> <ul data-bbox="236 1151 1460 1550" style="list-style-type: none"> <li>- AUTOADAPT. This function continuously adjusts the proportional-pressure curve and automatically sets a more efficient curve without compromising comfort demands.</li> <li>- FLOWADAPT. This control mode combines AUTOADAPT with a flow-limiting function. The pump continuously monitors the flow rate to ensure the desired maximum flow is not exceeded. This will save the cost of a separate pump-throttling valve.</li> <li>- Constant differential pressure. The pump head is kept constant, independent of the flow in the system.</li> <li>- Proportional pressure. The head of the pump will increase proportionally to the flow in the system to compensate for the large pressure losses in the distribution pipes.</li> <li>- Constant temperature. The return-pipe temperature is kept constant. Note: If the pump is installed in the flow pipe, an external temperature sensor must be installed in the return pipe of the system.</li> <li>- Constant differential temperature. The differential temperature can be measured by a differential-temperature sensor or two separate temperature sensors.</li> <li>- Constant curve. The pump can be set to run at a constant speed in the range of 25 to 100 % of the maximum speed.</li> </ul> <p data-bbox="199 1556 1449 1630">The product's minimum efficiency index (MEI) is greater or equal to 0.70. This is by the Commission Regulation (EU) considered as an indicative benchmark for best-performing water pump available on the market as from 1 January 2013.</p> <p data-bbox="199 1641 1442 1693">The operating panel on the motor terminal box features a four-inch TFT display, push-buttons and the Grundfos Eye indicator.</p> <p data-bbox="199 1700 965 1727">The display gives an intuitive and user-friendly interface to all functions.</p> <p data-bbox="199 1731 1460 1783">The push-buttons are used to navigate through the menu structure to access pump and performance data on site and enable setting of required setpoint as well as setting of pump to "Min." or "Max." operation or to "Stop".</p> <p data-bbox="199 1789 1190 1816">The Grundfos Eye indicator on the operating panel provides visual indication of pump status:</p> <ul data-bbox="236 1818 1460 1962" style="list-style-type: none"> <li>• "Power on": Motor is running (rotating green indicator lights) or not running (permanently green indicator lights)</li> <li>• "Warning": Motor is still running (rotating yellow indicator lights) or has stopped (permanently yellow indicator lights)</li> <li>• "Alarm": Motor has stopped (flashing red indicator lights).</li> </ul> <p data-bbox="199 1964 1426 2038">Communication with the pump is also possible by means of Grundfos GO Remote (accessory). The remote control enables further settings as well as reading out of a number of parameters such as "Actual value", "Speed", "Power input" and total "Power consumption".</p>
