1. Product description

The Grundfos MAGNA1 circulator pumps are designed for circulating liquids in the following systems:

- heating systems
- air-conditioning and cooling systems
- domestic hot-water systems.

The pump range can also be used for the following systems:

- ground source heat pump systems
- solar-heating systems.

Duty range

Data	MAGNA1 (N) Single-head pumps	MAGNA1 D Twin-head pumps
Maximum flow rate, Q	71 m ³ /h	110 m ³ /h
Maximum head, H	18 metres	
Maximum system pressure	1.0 MPa (10 bar)	
Liquid temperature	-10 - 110 °C	

TM05 5862 4112 - TM05 5863 4112

Fig. 1 Single-head MAGNA1 pumps

Characteristic features

- Proportional-pressure control.
- constant-pressure control.
- constant-curve/constant-speed duty.
- no external motor protection required.
- insulating shells supplied with single-head pumps for heating systems.
- wide temperature range due to thermal separation of the control box and pumped media.

Benefits

- Simple installation.
- LED indication of the pump setting.
- Low noise level.
- No maintenance and long life.
- The complete range is available for a maximum system pressure of 10 bar (PN 10).

Main applications

Heating systems

- Main pump
- mixing loops
- domestic hot-water systems
- heating surfaces
- air-conditioning surfaces.

The circulator pumps are designed for circulating liquids in heating systems with variable flows where it is desirable to optimise the setting of the pump duty point, thus reducing energy costs. The pumps are also suitable for domestic hot-water systems. Grundfos strongly recommends that you use stainless-steel pumps in domestic hot-water systems to avoid corrosion.

To ensure correct operation, it is important that the sizing range of the system falls within the duty range of the pump.

Type key

Code	Example	MAGNA1	D	80	-120	(F)	(N)	360

Note: For more information about the product numbers of the various pump variants, see page 114.

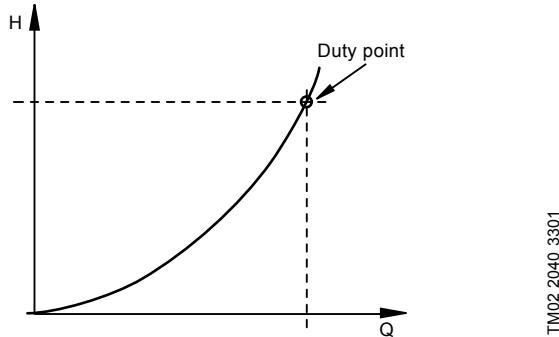

Pump selection

Pump size

The selection of pump size should be based on the following:

- the required maximum flow
- the maximum pressure loss in the system.

Refer to the system characteristics to determine the duty point. See fig. 5.

TM02 2040 3301

Fig. 5 System characteristic

Operating conditions

You must check whether the operating conditions are fulfilled, i.e.

- liquid quality and temperature
- ambient conditions
- minimum inlet pressure
- maximum operating pressure.

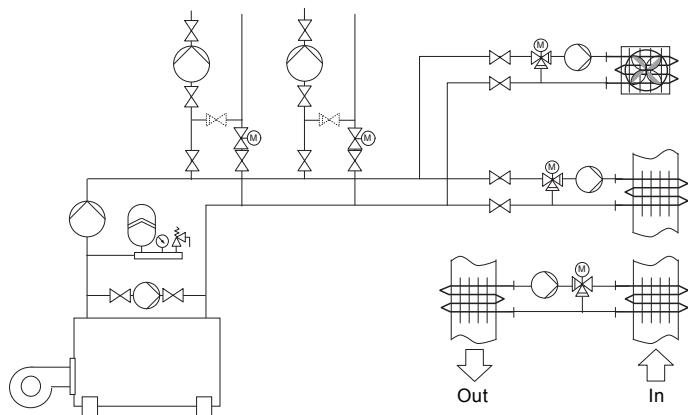

Control modes

- Proportional-pressure control in systems with considerable pressure losses in relation to large flow variations.
- Constant-pressure control in systems with insignificant pressure losses in relation to large flow variations.
- In constant-curve/constant-speed operation, the pump will run at a constant speed, independent of the actual flow demand in the system.

3. Functions

System applications

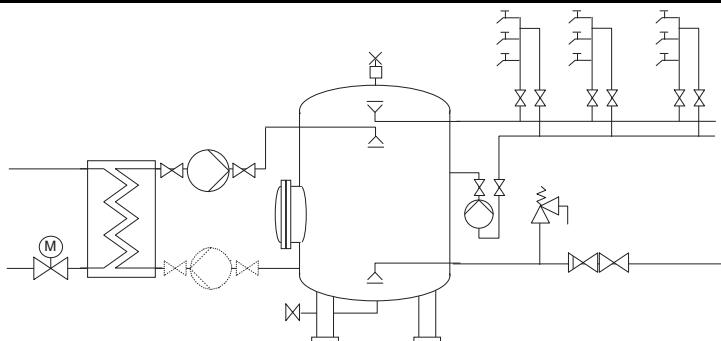

Heating systems

- One- and two-pipe heating systems
- main pumps
- zone pumps
- mixing loops
- boiler shunt pumps
- pumps for heating surfaces
- calorifiers
- underfloor heating systems
- solar heating systems
- ground source heat pump systems
- heat recovery systems.

TM01 0168 0697

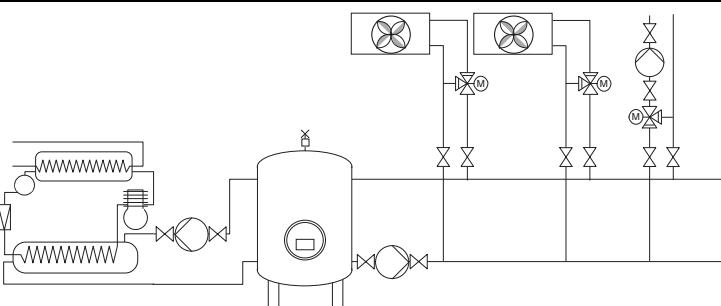

Domestic hot-water systems

- Domestic hot-water systems

TM01 0168 0697

Air-conditioning and cooling systems

- Two-pipe air-conditioning systems
- main pumps
- zone pumps
- pumps for refrigeration units
- heat pump systems
- ground source heat pump systems
- heat recovery systems
- air-conditioning surfaces.

TM01 0170 0697

Selection of control mode

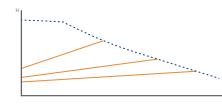

System application

In systems with relatively large pressure losses in the distribution pipes and in air-conditioning and cooling systems.

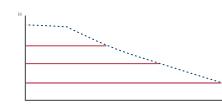

- Two-pipe heating systems with thermostatic valves and
 - very long distribution pipes
 - strongly throttled balancing valves
 - differential-pressure regulators
 - large pressure losses in those parts of the system through which the total quantity of water flows (for example boiler, heat exchanger and distribution pipe up to the first branching).
- Primary circuit pumps in systems with large pressure losses in the primary circuit.
- Air-conditioning systems with
 - heat exchangers (fan coils)
 - cooling ceilings
 - cooling surfaces.

Select this control mode

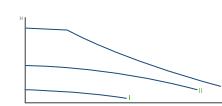

Proportional pressure

Constant pressure

Constant curve

In systems with relatively small pressure losses in the distribution pipes.

- Two-pipe heating systems with thermostatic valves and
 - dimensioned for natural circulation
 - small pressure losses in those parts of the system through which the total quantity of water flows (for example boiler, heat exchanger and distribution pipe up to the first branching) or
 - modified to a high differential temperature between the flow pipe and return pipe (for example district heating).
- Underfloor heating systems with thermostatic valves.
- One-pipe heating systems with thermostatic valves or pipe balancing valves.
- Primary circuit pumps in systems with small pressure losses in the primary circuit.

You can also set the pump to operate according to the maximum or minimum curve, like an uncontrolled pump:

- You can use the maximum curve mode in periods in which a maximum flow is required. This operating mode is for instance suitable for hot-water priority in domestic hot-water systems.
- You can use the minimum curve mode in periods in which a minimum flow is required.

Control modes

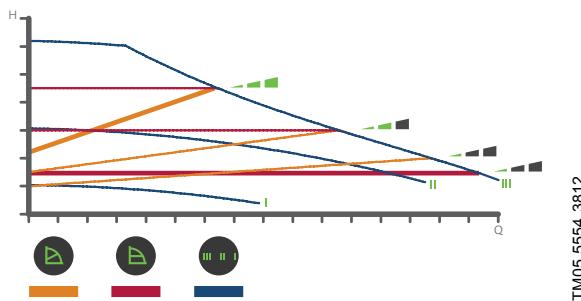

Fig. 6 Selection of pump setting for system type

Factory setting: Intermediate proportional-pressure curve, referred to as PP2.

Proportional-pressure curve (PP1, PP2 or PP3)

Proportional-pressure control adjusts the pump performance to the actual heat demand in the system, but the pump performance follows the selected performance curve, PP1, PP2 or PP3. See fig. 7 where PP2 has been selected.

For further information, see [Selection of control mode](#), page 11.

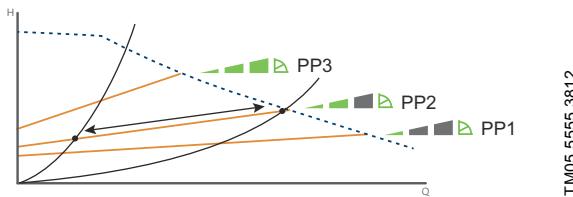

Fig. 7 Three proportional-pressure curves/settings

The selection of the right proportional-pressure setting depends on the characteristics of the heating system in question and the actual heat demand.

Constant-pressure curve (CP1, CP2 or CP3)

Constant-pressure control adjusts the pump performance to the actual heat demand in the system, but the pump performance follows the selected performance curve, CP1, CP2 or CP3. See fig. 8 where CP1 has been selected.

For further information, see [Selection of control mode](#), page 11.

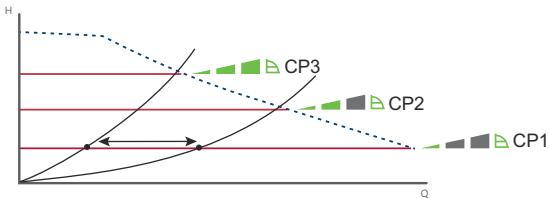

Fig. 8 Three constant-pressure curves/settings

The selection of the right constant-pressure setting depends on the characteristics of the heating system in question and the actual heat demand.

Constant curve/constant speed (I, II or III)

In constant-curve/constant-speed operation, the pump will run at a constant speed, independent of the actual flow demand in the system. The pump performance follows the selected performance curve, I, II or III. See fig. 9 where II has been selected.

For further information, see [Selection of control mode](#), page 11.

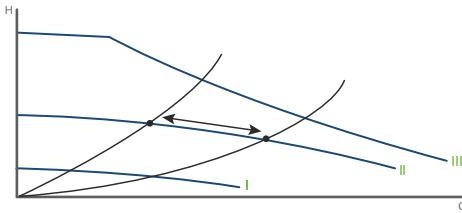

Fig. 9 Three constant-curve/constant-speed settings

The selection of the right constant-curve/constant-speed setting depends on the characteristics of the heating system in question.

Control panel

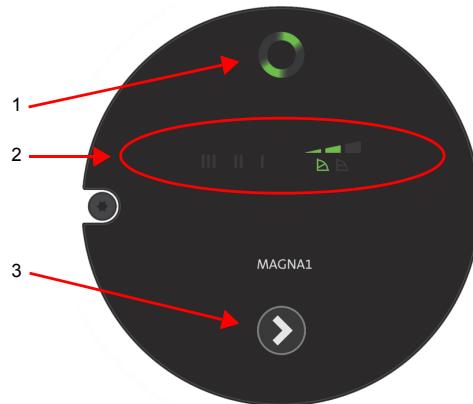

Fig. 10 Control panel at first startup

The control panel on the pump comprises the following:

Pos.	Description
1	Grundfos Eye operating status. See Grundfos Eye below.
2	LEDs indicate the pump setting. See LEDs indicating the pump setting below.
3	Push-button for selection of pump setting.

Grundfos Eye

Grundfos Eye is on when the power supply has been switched on. See fig. 10, pos. 1.

Grundfos Eye is an indicator light providing information about the actual pump status.

The indicator light will flash in different sequences and provide information about the following:

- power on or off
- pump running or stopped
- pump alarms.

LEDs indicating the pump setting

The pump has nine optional performance settings which you can select with the push-button. See fig. 10, pos. 3.

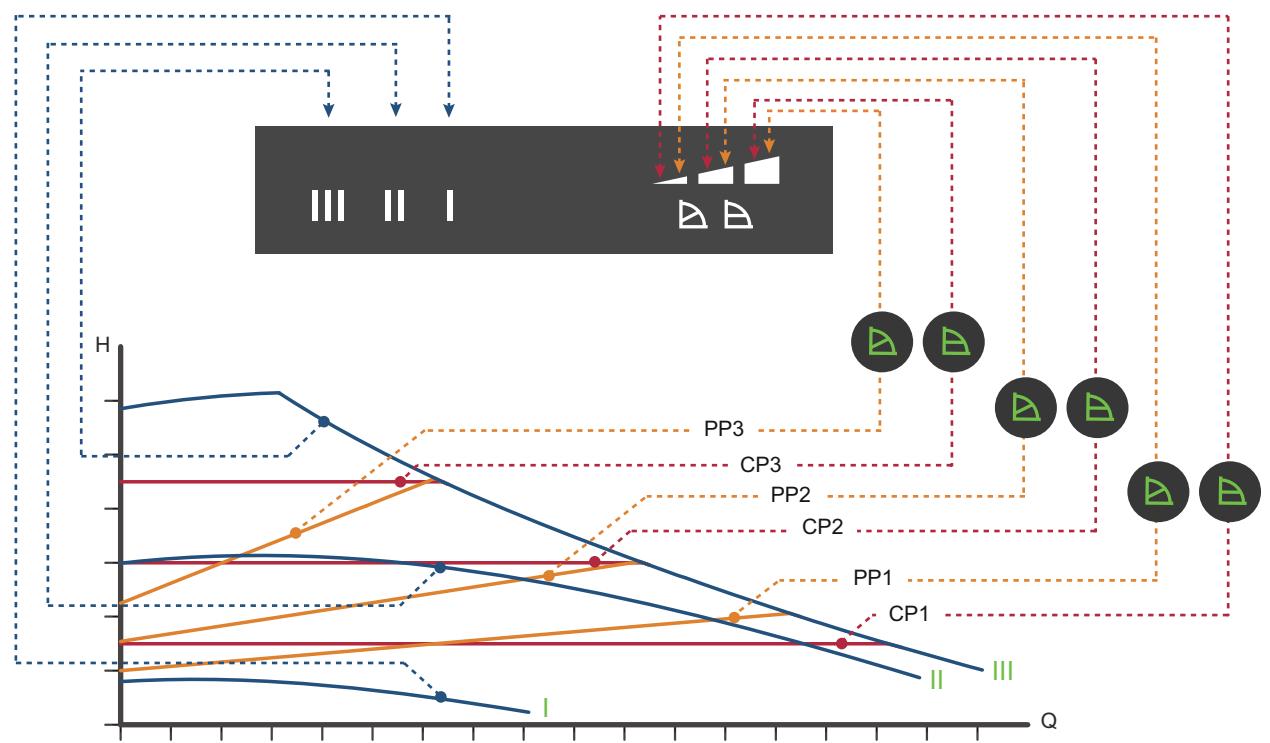

The pump setting is indicated by the LEDs in the display. See fig. 10, pos. 2.

Fig. 11 Factory setting, PP2

Button presses	Active light fields	Description
0		Intermediate proportional-pressure curve, referred to as PP2
1		Highest proportional-pressure curve, referred to as PP3
2		Lowest constant-pressure curve, referred to as CP1
3		Intermediate constant-pressure curve, referred to as CP2
4		Highest constant-pressure curve, referred to as CP3
5		Constant curve/constant speed III
6		Constant curve/constant speed II
7		Constant curve/constant speed I
8		Lowest proportional-pressure curve, referred to as PP1

Overview of settings

TM05 2777 0512

Fig. 12 Pump setting in relation to pump performance

Setting	Pump curve	Function
PP1	Lowest proportional-pressure curve	The duty point of the pump will move up or down on the lowest proportional-pressure curve, depending on the heat demand. See fig. 12. The head (pressure) is reduced at falling heat demand and increased at rising heat demand.
PP2	Intermediate proportional-pressure curve	The duty point of the pump will move up or down on the intermediate proportional-pressure curve, depending on the heat demand. See fig. 12. The head (pressure) is reduced at falling heat demand and increased at rising heat demand.
PP3	Highest proportional-pressure curve	The duty point of the pump will move up or down on the highest proportional-pressure curve, depending on the heat demand. See fig. 12. The head (pressure) is reduced at falling heat demand and increased at rising heat demand.
CP1	Lowest constant-pressure curve	The duty point of the pump will move out or in on the lowest constant-pressure curve, depending on the heat demand in the system. See fig. 12. The head (pressure) is kept constant, irrespective of the heat demand.
CP2	Intermediate constant-pressure curve	The duty point of the pump will move out or in on the intermediate constant-pressure curve, depending on the heat demand in the system. See fig. 12. The head (pressure) is kept constant, irrespective of the heat demand.
CP3	Highest constant-pressure curve	The duty point of the pump will move out or in on the highest constant-pressure curve, depending on the heat demand in the system. See fig. 12. The head (pressure) is kept constant, irrespective of the heat demand.
III	Speed III	The pump runs on a constant curve which means that it runs at a constant speed. At speed III, the pump is set to run on the maximum curve under all operating conditions. See fig. 12. Quick venting of the pump can be obtained by setting the pump to speed III for a short period.
II	Speed II	The pump runs on a constant curve which means that it runs at a constant speed. At speed II, the pump is set to run on the intermediate curve under all operating conditions. See fig. 12.
I	Speed I	The pump runs on a constant curve which means that it runs at a constant speed. At speed I, the pump is set to run on the minimum curve under all operating conditions. See fig. 12.

4. Operating conditions

General recommendations

Water in heating systems	Water quality according to local standards such as the German standard VDI 2035
Water containing glycol	Maximum viscosity = 10-50 cSt ~ 50 % water / 50 % glycol at -10 °C

Liquid temperature

-10 - 110 °C.

Ambient conditions

Ambient temperature during operation	0-40 °C
Ambient temperature during storage and transport	-40 - 70 °C
Relative air humidity	Max. 95 %

Maximum operating pressure

PN 6: 6 bar / 0.6 MPa

PN 10: 10 bar / 1.0 MPa.

Minimum inlet pressure

The following relative minimum inlet pressure must be available at the pump inlet during operation to avoid cavitation noise and damage to the pump bearings.

Note: The values in the table below apply to single-head pumps and twin-head pumps in single-head operation.

Single-head pumps DN	Liquid temperature		
	75 °C	95 °C	110 °C
	Inlet pressure [bar] / [MPa]		
25-40/60/80/100/120	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
32-40/60/80/100/120	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
32-120 F	0.10 / 0.01	0.20 / 0.020	0.7 / 0.07
40-40/60 F	0.10 / 0.01	0.35 / 0.035	1.0 / 0.10
40-80/100/120/150/180 F	0.10 / 0.01	0.50 / 0.05	1.0 / 0.10
50-40/60/80 F	0.10 / 0.01	0.40 / 0.04	1.0 / 0.10
50-100/128 F	0.10 / 0.01	0.50 / 0.05	1.0 / 0.10
50-150/180 F	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17
65-40/60/80/100/120/150 F	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17
80-40/60/80/100/120 F	0.50 / 0.05	1.00 / 0.10	1.5 / 0.15
100-40/60/80/100/120 F	0.70 / 0.07	1.20 / 0.12	1.7 / 0.17

In the case of manual synchronous operation, the required relative inlet pressure must be increased by 0.1 bar / 0.01 MPa compared to the stated values for single-head pumps or twin-head pumps in single-head operation.

Note: The actual inlet pressure plus pump pressure against a closed valve must be lower than the maximum permissible system pressure.

The relative minimum inlet pressures apply to pumps installed up to 300 metres above sea level. For altitudes above 300 metres, the required relative inlet pressure must be increased by 0.01 bar / 0.001 MPa per 100 metres altitude. The pump is only approved for an altitude of 2000 metres above sea level.

Pumped liquids

The pump is suitable for thin, clean, non-aggressive liquids, not containing solid particles or fibres that may attack the pump mechanically or chemically.

In heating systems, the water must meet the requirements of accepted standards on water quality in heating systems, for example the German standard VDI 2035.

In domestic hot-water systems, we recommend that you keep the liquid temperature below 65 °C to eliminate the risk of lime precipitation.

Do not use the pump for flammable, combustible or explosive liquids, such as diesel oil and petrol.

Do not use the pump for aggressive liquids, such as acids and seawater.

If the pump is not used during periods of frost, take the necessary steps to prevent frost bursts.

Additives with a density and/or kinematic viscosity higher than those of water will reduce the hydraulic performance.

Do not use additives that in any way can or will disturb the functionality of the pump.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are lime content, pH value, temperature and content of solvents and oils.

You can use the pump for pumping water/glycol mixtures up to 50 %. See page 15.

The pumping of glycol mixtures will reduce the hydraulic performance.

Electrical data

Pump type	MAGNA1 (D).
Enclosure class	IPX4D (EN 60529).
Insulation class	F.
Supply voltage	1 x 230 V ± 10 %, 50/60 Hz, PE.
Leakage current	$I_{leakage} < 3.5 \text{ mA}$. The leakage current is measured in accordance with EN 60335-1.
EMC	EN 55014-1:2006, EN 55014-2:1998, EN 61000-3-3:2013 and EN 61000-3-2:2006.

Sound pressure level

Pump type	MAGNA1 (D).
Sound pressure level	$\leq 43 \text{ dB(A)}$.

5. Construction

The MAGNA1 is of the canned-rotor type, i.e. pump and motor form an integral unit without shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid.

The pump is characterised by the following:

- controller integrated in the control box
- control panel on the control box
- twin-head versions
- no external motor protection required
- insulating shells supplied with single-head pumps for heating systems.

Motor and electronic controller

The pump incorporates a 4-pole synchronous, permanent-magnet motor (PM motor). This motor type is characterised by higher efficiency than a conventional asynchronous squirrel-cage motor.

The pump speed is controlled by an integrated frequency converter.

Pump connections

Threaded pipe connections according to ISO 228-1.

Flange dimensions according to EN 1092-2.

Surface treatment

The pump housing and pump head are electrocoated to improve the corrosion resistance.

Electrocoating includes:

- alkaline cleaning
- pretreatment with zinc phosphate coating
- cathodic electrocoating (epoxy)
- curing of paint film at 200-250 °C.

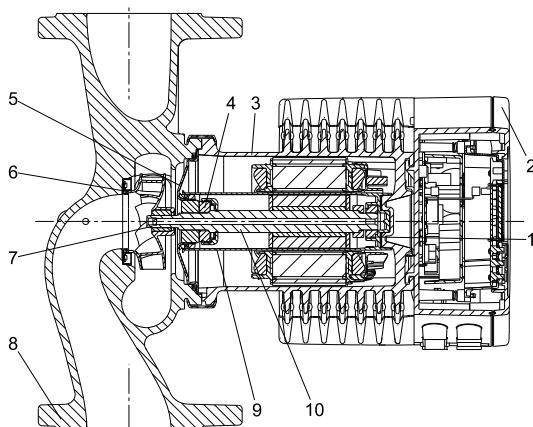

The pump housing of stainless-steel versions is not treated and painted and appears in blank steel. See fig. 13.

6. Installation

Mechanical installation

The pump is designed for indoor installation. The pump must be installed with horizontal motor shaft. The pump may be installed in horizontal as well as vertical pipes.

TM05 5518 3812

Fig. 16 Installation positions

Arrows on the pump housing indicate the liquid flow direction through the pump.

The control box must be in horizontal position with the Grundfos logo in vertical position. See fig. 16.

This is described in the installation and operating instructions.

<http://GRUNDFOS.COM/MAGNA1-MANUAL>

The pump must be installed in such a way that it is not stressed by the pipework.

The pump may be suspended directly in the pipes, provided that the pipework can support the pump. Twin-head pumps are prepared for installation on a mounting bracket or base plate.

To ensure adequate cooling of motor and electronics, the following must be observed:

- Position the pump in such a way that sufficient cooling is ensured.
- The ambient temperature must not exceed 40 °C.

The discharge valve must always be open so much that 10 % of nominal flow can pass to ensure sufficient circulation in the application. Otherwise, the temperature of the pumped liquid may become too high and cause damage to the pump.

Insulating shells

The insulating shells supplied with single-head pumps are for heating systems and must be fitted as part of the installation.

Insulating shells for pumps for air-conditioning and cooling systems are available as an accessory.

See *Insulating kits for air-conditioning and cooling systems* on page 108.

Note: Insulating shells are not available for twin-head pumps.

Electrical installation

The electrical connection and protection must be carried out in accordance with local regulations.

- The pump must be connected to an external mains switch.
- The pump must always be correctly earthed.
- The pump requires no external motor protection.
- The pump incorporates thermal protection against slow overloading and blocking.
- When switched on via the power supply, the pump will start pumping after approx. 5 seconds.

Note: The number of starts and stops via the power supply must not exceed four times per hour.

The pump mains connection must be made as shown in fig. 17 or 18, page 20.

Cables

All cables used must be connected in accordance with local regulations.

Additional protection

If the pump is connected to an electric installation where an earth leakage circuit breaker (ELCB) is used as an additional protection, this circuit breaker must trip when earth fault currents with DC content (pulsating DC) occur.

The earth leakage circuit breaker must be marked with the first or both of the symbols shown below:

Symbol	Description
	High-sensitivity ELCB, type A, according to IEC 60775
	High-sensitivity ELCB, type B, according to IEC 60775

TM05 5277 3712

7. Guide to performance curves

Each pump setting has its own performance curve, QH curve. A power curve, P1 curve, is associated with each QH curve. The power curve shows the pump power consumption, P1, in watt at a given QH curve.

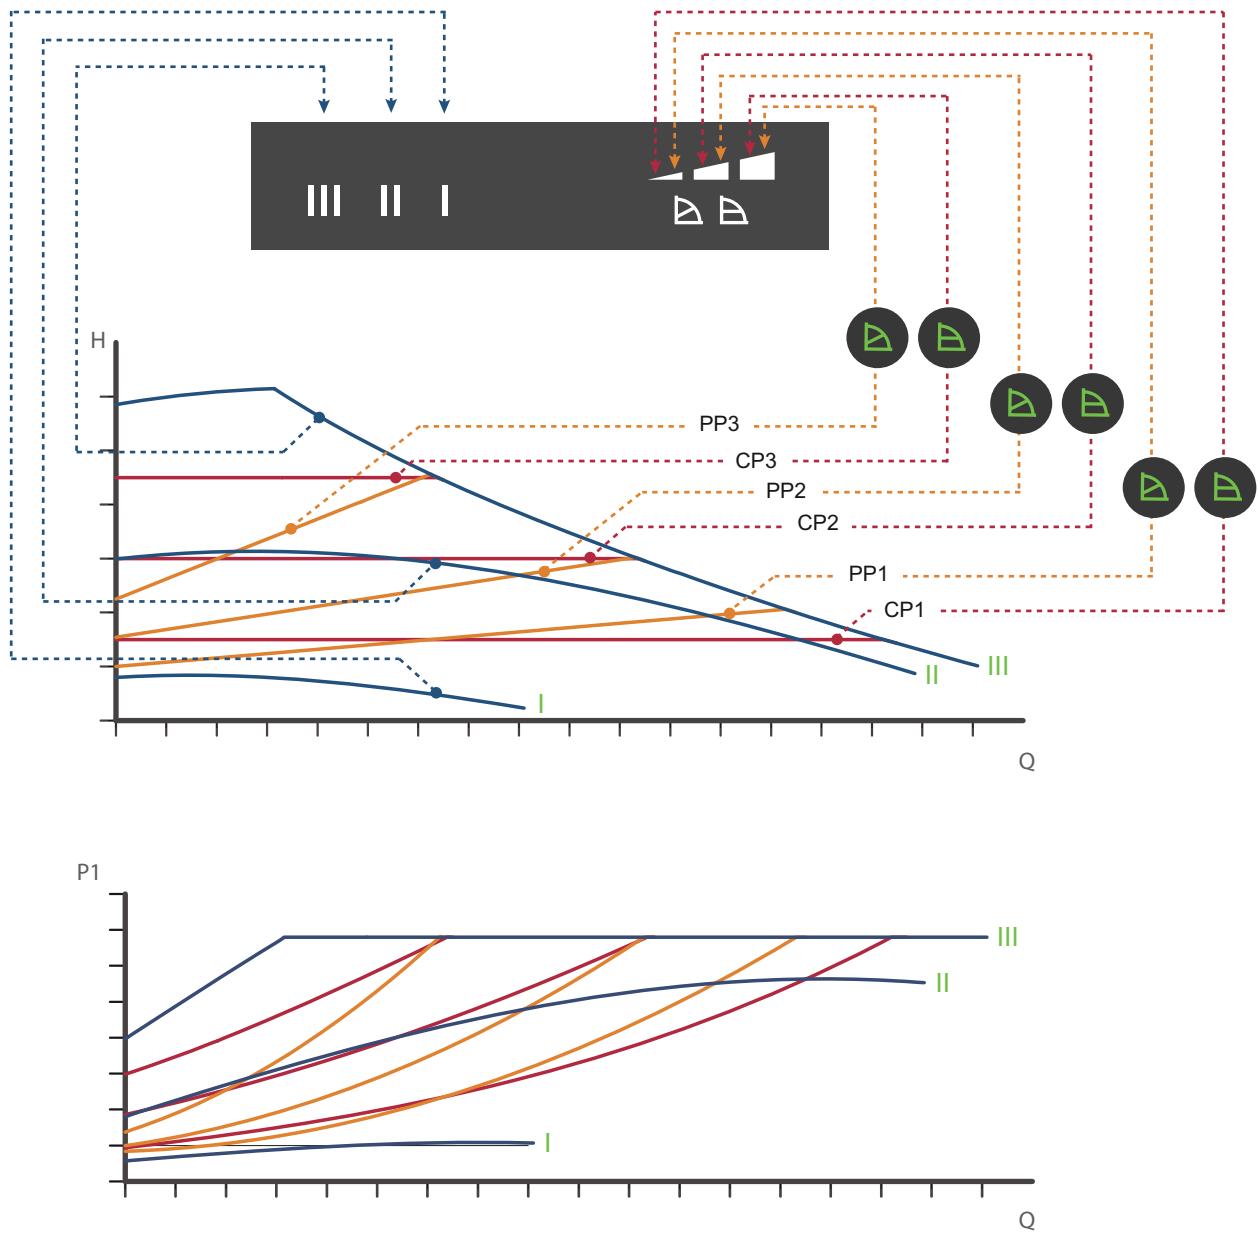

Fig. 19 Performance curves in relation to pump setting

Setting	Pump curve
PP1	Lowest proportional-pressure curve
PP2	Intermediate proportional-pressure curve
PP3	Highest proportional-pressure curve
CP1	Lowest constant-pressure curve
CP2	Intermediate constant-pressure curve
CP3	Highest constant-pressure curve
III	Constant-curve duty, fixed speed III
II	Constant-curve duty, fixed speed II
I	Constant-curve duty, fixed speed I

TM05 2778 4112

8. Curve conditions

Performance curves

The guidelines below apply to the performance curves on pages 24 to 107:

- Test liquid: airless water.
- The curves apply to a density of $\rho = 998.2 \text{ kg/m}^3$ and a liquid temperature of 20 °C.
- All curves show average values and should not be used as guarantee curves. If a specific minimum performance is required, make individual measurements.
- The curves apply to a kinematic viscosity of $\nu = 1.004 \text{ mm}^2/\text{s}$ (1.004 cSt).
- Reference supply voltage: 1 x 230 V, 50 Hz.
- Curves obtained according to EN 16297.

Symbols used on the following pages

The pump is energy-optimised and complies with the EuP Directive, Commission Regulation (EC) No 641/2009, which has been effective as from 1 January 2013.

For MAGNA1 pumps, the energy efficiency index (EEI) is ≤ 0.23 .

Figure 20 shows the energy consumption index for a typical circulator pump compared to the various EEI limits.

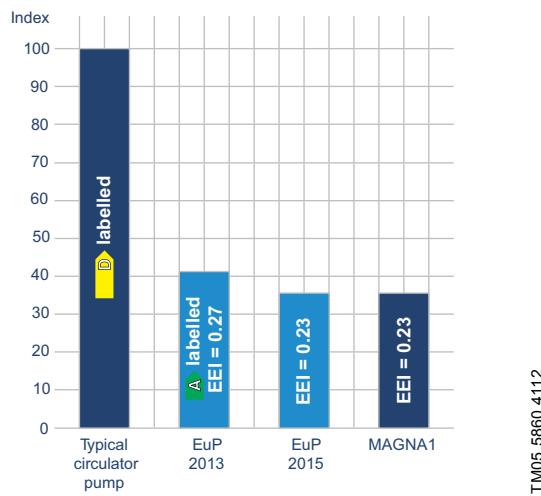

Fig. 20 Energy consumption index

With an energy efficiency index (EEI) equal to the EuP 2015, you can achieve significant energy savings compared to a typical circulator pump and thus a remarkably fast return on investment. For more information about the new energy directive, please visit the QR code on the pump nameplate.

<http://energy.grundfos.com>

TM05 3826 1712

Fig. 21 QR code on the pump nameplate

With Grundfos GO or a smartphone, you can get the following information about the pump:

- product photo
- pump performance curves
- dimensional sketches
- wiring diagram
- quotation text
- technical data
- service parts list
- PDF files, such as data booklet and installation and operating instructions.

Markings and approvals

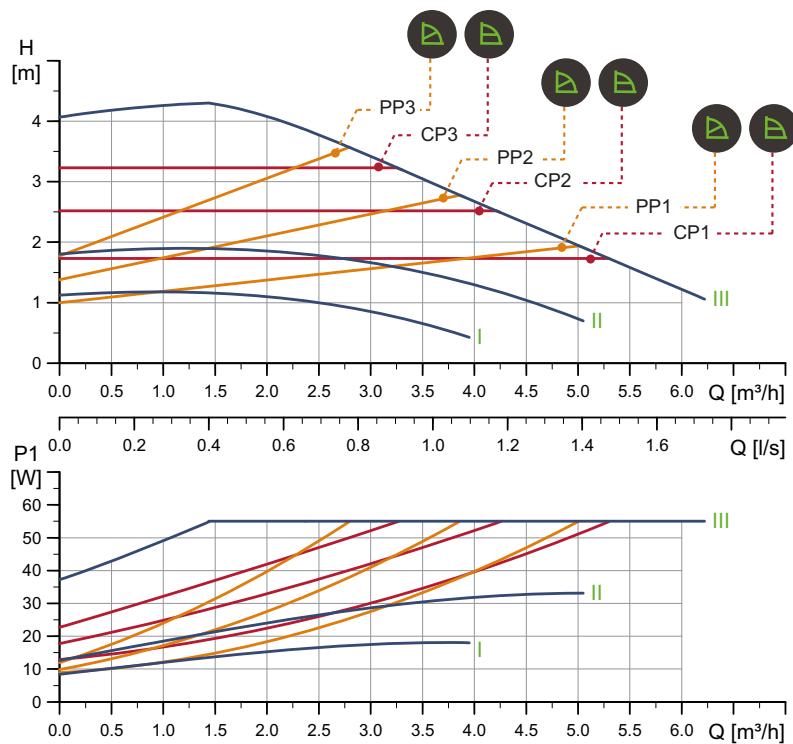

The following marks are available after positive testing of the pump:

Mark	Description
	The EC marking is based on the declaration of conformity issued by the manufacturer who certifies that the product meets all the appropriate provisions of the relevant legislation implementing certain European Directives.
	Technical working equipment and commodities ready for use, in the sense of ProdSG according to German VDE/EN/IEC standards, other technical specifications as well as possible provisions of law with respect to safety and health requirements.
	Mark of Conformity in the Russia, Kazakhstan and Belarus Customs Union for imports of Machinery and Industrial Equipment
	The product complies with the requirements of the United Kingdom Water Supply (Water Fittings) Regulations/Scottish Water Byelaws. Applies to the stainless-steel version only.
	The Turkish Standards Institute (TSE) certified that this product complies with the relevant directives and standards.
ACS	ACS - Attestation de Conformité Sanitaire. The suitability of this product to come into contact with water destined for human consumption has been evaluated and approved by a laboratory accredited by the French Ministry of Health.

10. Accessories

Insulating kits for air-conditioning and cooling systems

You can fit single-head pumps for air-conditioning and cooling systems with insulating shells. A kit consists of two shells made of polyurethane and a self-adhesive seal to ensure tight assembly.

TM05 5526 3812

Fig. 22 Fitting the insulating shells to a MAGNA1 pump

Note: The dimensions of the insulating shells for air-conditioning and cooling systems differ from those of the insulating shells for heating systems. You can use the insulating shells for both stainless-steel and cast-iron pumps.

Pump type	Product number
MAGNA1 25-40/60/80/100/120 (N)	98538852

MAGNA1 100-40/60/80/100/120 F	98164611

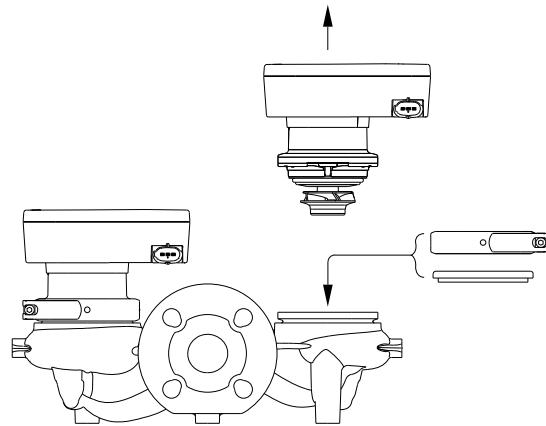

Note: Insulating shells for single-head pumps for heating systems are supplied with the pump. You can order the insulating shells as a service kit.

Specifications

- Specific volume resistance $\geq 10^{15}$ Ωcm DIN 60093
- thermal conductivity at 10 °C 0.036 W/mK and at 40 °C 0.039 W/mK DIN 52612
- density $33 \pm 5 \text{ kg/m}^3$ ISO 845
- working temperature range -40/+90 °C ISO 2796.

Blanking flanges

You can use a blanking flange to blank off the opening when you have removed one of the pumps of a twin-head pump for service to enable uninterrupted operation of the other pump.

Thread types

G-threads have a cylindrical form in accordance with the EN-ISO 228-1 standard. R-threads have a conical form in accordance with the ISO 7-1 standard. In the case of a thread of size 1 1/2", the threads are specified as G 1 1/2 or R 1 1/2. You can only screw male G-threads (cylindrical) into female G-threads. You can screw male R-threads (conical) into female G- or R-threads. See fig. 26.

12. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

<http://product-selection.grundfos.com>

SIZING enables you to size a pump based on entered data and selection choices.

REPLACEMENT enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

The screenshot shows the Grundfos Product Center homepage. At the top, there's a navigation bar with links for HOME, FIND PRODUCT, COMPARE, YOUR PROJECTS, SAVED ITEMS, and HELP. To the right of the navigation is a user profile icon, 'Product range: United Kingdom | 50 Hz | Language: English', and a 'Change settings' link. Below the navigation is a search bar with placeholder text 'Input product number or a whole or partial product name' and a 'SEARCH' button. Underneath the search bar are four large buttons: 'SIZING' (blue), 'CATALOGUE' (green), 'REPLACEMENT' (orange), and 'LIQUIDS' (brown). The 'SIZING' button has a callout pointing to the 'QUICK SIZING' section. The 'CATALOGUE' button has a callout pointing to its description. The 'REPLACEMENT' button has a callout pointing to its description. The 'LIQUIDS' button has a callout pointing to its description.
